Analysis is made of the control system of the XB-36 bomber. This analysis is an addendum to the stress analysis previously given for the YB-36 and B-36A bombers. Attention has been given to the control column, aileron controls, elevator controls, elevator trim tab system, rudder controls and brake pedal system, rudder control system and rudder trim tab system. A summary of the margins of safety is included.

REPORT NO. FZS-36-620
MODEL X B-36
DATE June 11, 1947

INTRODUCTION

This addendum is written to incorporate the analysis of the XB-36 Control System. The operation of the control system and the design conditions are the same for the XB-36 as previously shown for the YB-36 and B-36A in C.V.A.C. Report FZS-36-150, Stress Analysis of Control System; however, there are minor differences in the construction of some of the components that will be analyzed in this addendum.

CONTROL COLUMN

THE CONTROL COLUMN DESIGN LOADS FOR THE XB-36 ARE THE SAME AS THOSE SHOWN FOR THE YB-36 & B-36A ON PAGES 4, 5 & 6 OF FZS-36-150.

AILERON SYSTEM IN CONTROL COLUMN

THE AILERON SYSTEM IN THE CONTROL COLUMN OF THE XB-36 IS IDENTICAL TO THAT OF THE YB-36 & B-36A. SINCE THE LOADINGS ARE ALSO THE SAME, THE ANALYSIS FOR THIS REGION SHOULD BE REFERRED TO PAGES 6 THROUGH 12 OF FZS-36-150.

ELEVATOR SYSTEM IN CONTROL COLUMN

THE ELEVATOR SYSTEM IN THE CONTROL COLUMN OF THE XB-36 IS THE SAME AS THAT FOR THE YB-36 & B-36A EXCEPT THAT THE COLUMN IS ONE INCH SHORTER AND THE ELEVATOR CABLE IS ATTACHED TO A HORN ON THE TORQUE TUBE (REF. 36C003) INSTEAD OF THE PUSH-PULL TUBE (REF. 36C4739)

ALL COMPONENTS SHOWN IN FZS-36-150 WHICH WILL HAVE DIFFERENT STRESSES DUE TO THESE CHANGES ARE ANALYZED IN THIS ADDENDUM.

THIS ADDENDUM WILL ALSO ANALYZE ANY NEW PARTS WHICH ARE ADDED AS A RESULT OF THIS CHANGE.

ALL COMPONENTS OF THE ELEVATOR SYSTEM IN THE COLUMN WHICH ARE ANALYZED IN FZS-36-150 WHICH DO NOT APPEAR IN THIS ADDENDUM ARE EITHER NOT USED ON THE XB-36 OR THE STRESSES INVOLVED HAVE NOT BEEN ALTERED BY THE ABOVE CHANGES.

BENDING MOMENT DUE TO FORE & AFT LOADS

AT TOP OF BASE CASTING:

$$\begin{aligned} &= 450 \times 23.25 \quad (\text{REF. FZS-36-150 WITH COLUMN} \\ &= 10,500 \text{ IN. LBS} \quad \quad \quad \text{1 IN. SHORTER.}) \end{aligned}$$

AT $\frac{1}{2}$ OF TORQUE TUBE:

$$\begin{aligned} &= 450 \times 93.5 \\ &= 15,060 \text{ IN. LBS.} \end{aligned}$$

BENDING MOMENT DUE TO SIDE LOAD
AT TOP OF BASE CASTING:

$$= 150 \times 23.25 \\ = 3490 \text{ IN. LBS.}$$

AT $\frac{1}{2}$ TORQUE TUBE:

$$= 150 \times 33.5 \\ = 5025 \text{ IN. LBS.}$$

TORSION DUE TO SIDE LOAD

$$T = 705 \text{ IN. LBS.} \\ (\text{REF. FZS-36-150, PG. 13})$$

THE COLUMN IS CRITICAL IN COMBINED BENDING ABOUT BOTH AXES AND TORSION ON A SECTION AT THE TOP OF THE BASE CASTING.

$$B.M._{XX} = 10500 \text{ IN. LBS.}$$

$$B.M._{YY} = 3490 \text{ IN. LBS.}$$

$$\text{TORQUE} = 705 \text{ IN. LBS.}$$

SECTION PROPERTIES

$$I_{XX} = .4679 \text{ IN.}^4 (\text{REF. FZS-36-150, PAGE 17})$$

$$I_{YY} = 1.5825 \text{ IN.}^4 (\quad " \quad , \text{ PG. 17 })$$

$$Y = .999 \text{ IN. } (\quad " \quad , \text{ PG. 18 })$$

$$X = 2.185 \text{ IN. } (\quad " \quad , \text{ PG. 18 })$$

STRESSES AND MARGIN OF SAFETY

COLUMN AT TOP OF BASE CASTING ;

$$f_b = \frac{(3490 \times 2.185)}{1.5825} + \frac{(10,500 \times .999)}{.4679}$$
$$= 4820 + 22,400 = 27,220 \text{ P.S.I.}$$

$$f_s = 987 \text{ P.S.I. (REF. FZS-36-150, PAGE 18)}$$

$$F_{CY} = 32,000 \text{ P.S.I. (REF. FZS-36-150 PAGE 18)}$$

$$F_{ST} = 17,000 \text{ P.S.I. (REF. FZS-36-150 PAGE 18)}$$

$$R_b = \frac{27,200}{32,000} = .850 \quad R_s = .0580 \text{ (REF. FZS-36-150 PAGE 18)}$$

$$M.S. = \frac{1}{.850 + .0580} - 1 = \underline{+1.10}$$

BASE-CONTROL COLUMN (36C05A)

THE CASTING WILL BE CHECKED AT
SECTION A-A (REF. FZS-36-150, PAGE 19)

$$B.M._{x-x} = 150 \times 26.5 = 11,920 \text{ IN. LBS.}$$

$$B.M._{y-y} = 150 \times 26.5 = 3980 \text{ IN. LBS.}$$

$$T = 705 \text{ (REF. PAGE 3)}$$

$$I_{x-x} = 2.218 \text{ IN.}^4, I_{y-y} = 7.82 \text{ IN.}^4 \text{ (REF. FZS-36-150, PAGE 19)}$$

CONTROL COLUMN

BASE CASTING (CONT.)

$$V = 1.1095 \text{ IN.}, X = 2.297 \text{ IN.}, (\text{REF. FZS-36-150, PAGE 19})$$

$$f_b = \frac{3980 \times 2297}{7.82} + \frac{11920 \times 1.095}{2.218}$$

$$= 1,170 + 5,900 = 7,070 \text{ P.S.I.}$$

$$f_s = 254 \text{ P.S.I.} (\text{REF FZS-36-150, PAGE 19})$$

$$F_c = 16,000 \text{ P.S.I.} (\text{REF FZS-36-150, PAGE 19})$$

$$F_{ST} = 18,000 \text{ P.S.I.} (\text{REF FZS-36-150, PAGE 19})$$

$$R_b = \frac{7,070}{16,000} = .442, R_s = .014 (\text{REF FZS-36-150, P. 19})$$

$$\text{M.S.} = \frac{1}{.442 + .014} - 1 = \underline{\underline{+1.19}}$$

TORQUE TUBE

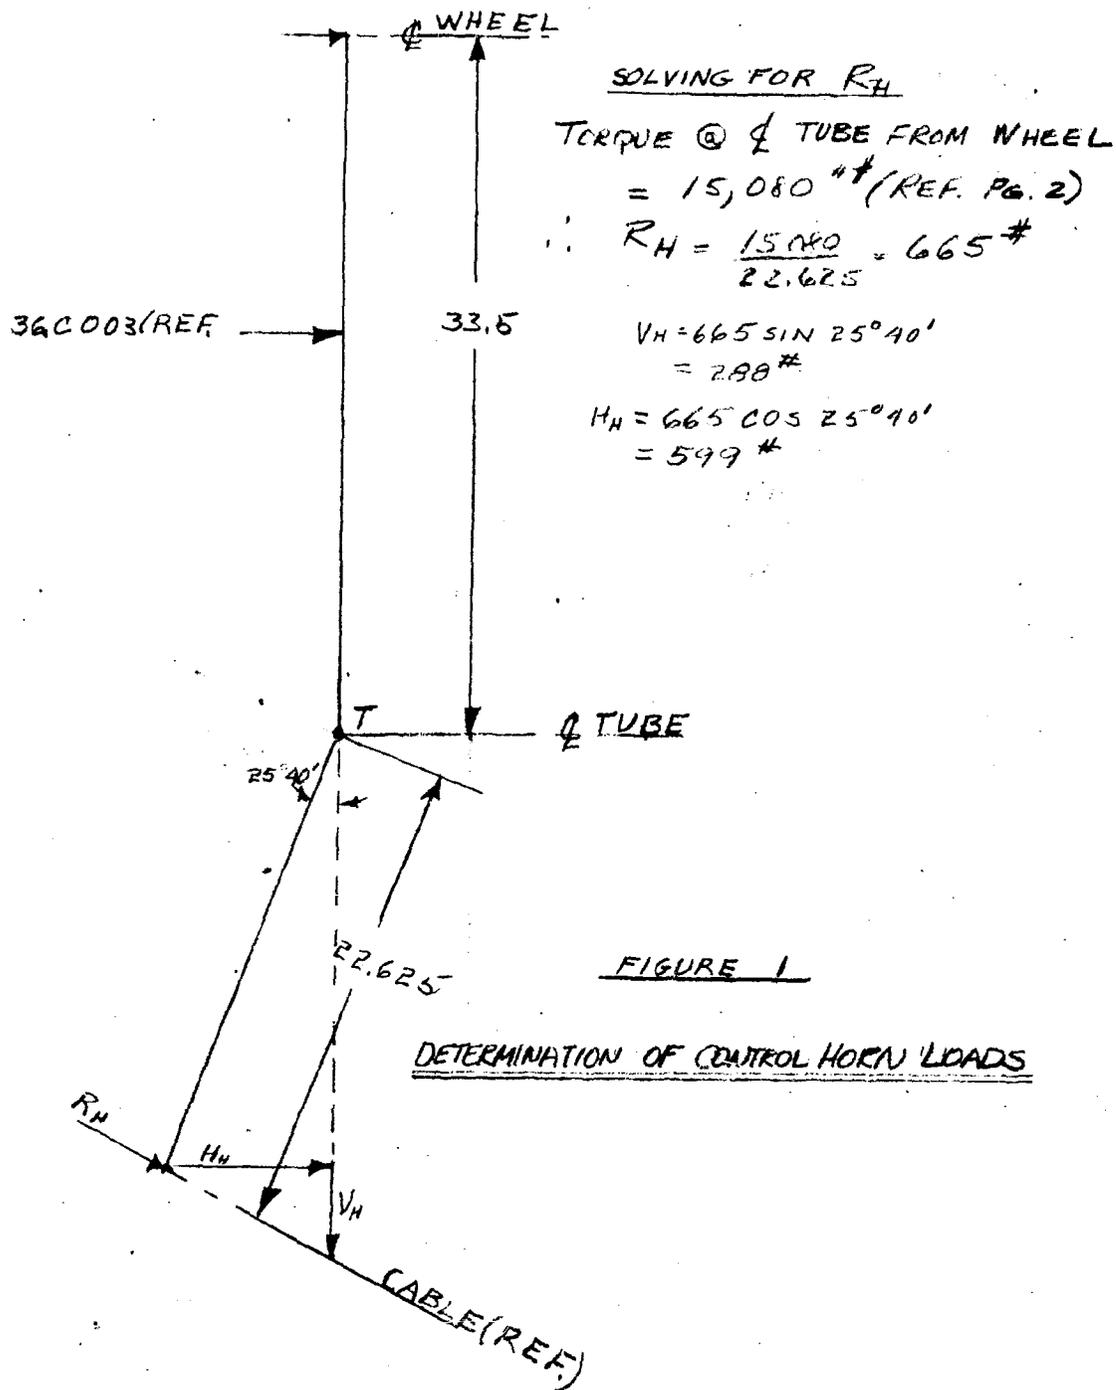

LOADS IN VERTICAL PLANE

1. SIDE LOAD ON CONTROL COLUMN

$$\text{MOMENT AT COLUMN BASE} = 5025 \text{ " \# } (\text{REF P 3})$$

2. VERT. COMPONENT OF CONTROL HOEN LOAD

$$= 288 \text{ \# } (\text{REF. P. 6})$$

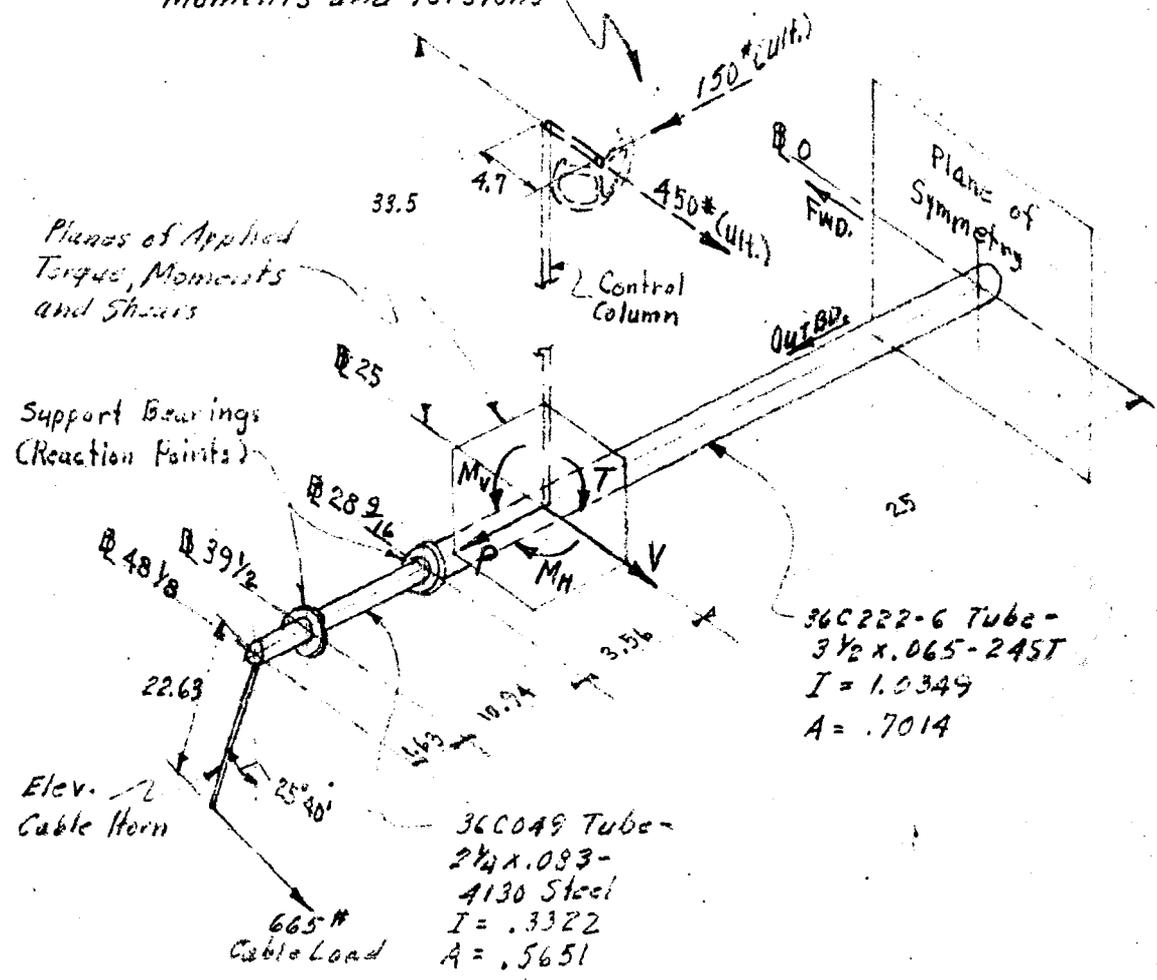

SCHEMATIC SKETCH OF TORQUE TUBE & APPLIED LOADS

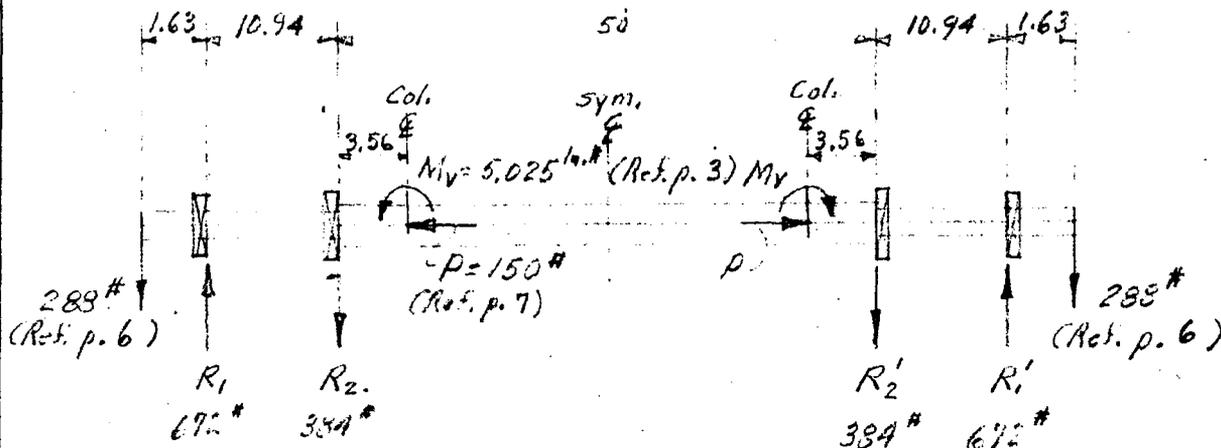

As the torque tube, and loading, are symmetrical about the plane of symmetry of the airplane only the L.H. is shown.

Loads Ref. FWS-36-150.
 Dimensions Ref. 36C004.

OUTBOARD TORQUE TUBE (2 YA X .083 STEEL)

The critical bending moment occurs at the inboard support bearing.

$$\text{Resultant Moment} = \sqrt{1,690^2 + 3,742^2} = 4,100 \text{ in. #}$$

$$T = 15,080 \text{ in. #}$$

Tube Properties

$$I = .3322 \quad Y = \frac{D}{2} = 1.125$$

$$A_{\text{(enclosed)}} = \pi \frac{2.167^2}{4} = 3.70 \text{ sq. in.}$$

$$f_{sT} = \frac{T}{2At} = \frac{15,080}{2(3.7)(.083)} = 24,500 \text{ #/in.}^2$$

$$f_b = \frac{MY}{I} = \frac{4,100(1.125)}{.3322} = 13,900 \text{ #/in.}^2$$

$$f_{s\text{max.}} = \sqrt{24,500^2 + \left(\frac{13,900}{2}\right)^2} = 25,450 \text{ #/in.}^2$$

$$f_{n\text{max.}} = \frac{13,900}{2} + 25,450 = 32,400 \text{ #/in.}^2$$

For $D/t = 2.25/.083 = 27.2$ and H.T. 150,000 #/in.²

Bending Modulus of Rupture = 202,000 #/in.² (AN2-5)

Torsional Modulus of Rigidity = 110,000 #/in.² (ANC-5)

$$R_B = \frac{3 \cdot 400}{202,000} = .15$$

$$R_T = \frac{25,450}{110,000} = .231$$

$$M_{s'} = \frac{1}{\sqrt{R_B^2 + R_T^2}} - 1$$

$$= \frac{1}{\sqrt{.15^2 + .231^2}} - 1 =$$

+2.61

The critical normal shear occurs just outboard of the outboard support bearing. This shear, on a VQ/I basis, will be combined with the torsional shear, at the N.A. of the tube.

$$f_{ST} = 24,500 \text{ #/in.}^2 \text{ (Ref. p. 12)}$$

Tube Properties: O.D. = 2.25 I.O. = 2.167

$$\bar{Y}_{(\frac{1}{2} \text{ tube})} = \frac{4(1.125^3 - 1.084^3)}{3\pi(1.125^2 - 1.084^2)} = .612$$

$$Q_{(\frac{1}{2} \text{ tube})} = \frac{A\bar{Y}}{2} = \frac{.5651(.612)}{2} = .173 \text{ in.}^3$$

$$\text{Resultant Normal Shear} = \sqrt{288^2 + 599^2} = 665 \text{ #}$$

$$f_s = \frac{VRQ}{2It} = \frac{665(.173)}{2(.332)(.083)} = 2,090 \text{ #/in.}^2$$

$$f_{smax} = f_s + f_{st} = 2,040 + 24,500 = 26,590 \text{ #/in.}^2$$

$$F_{su} = 105,000 \text{ #/in.}^2 \text{ (Ref. Airc-5)}$$

$$M.S. = \frac{105,000}{26,590} - 1 =$$

+ 2.95

CENTER TORQUE TUBE (3 1/2 x .065 - 245T)

The critical bending moment on this tube occurs between the control columns.

$$\text{Resultant Moment} = \sqrt{1,293^2 + 2,270^2} = 2,618 \text{ in. #}$$

$$\text{Axial Load} = 150 \text{ # (T)}$$

Tube Properties

$$I = 1.0349 \text{ in.}^4$$

$$A = .7014 \text{ in.}^2$$

$$y = 1.75 \text{ in.}$$

$$f_{c1} = \frac{My}{I} - \frac{P}{A} = \frac{2,618(1.75)}{1.0349} - \frac{150}{.7014} = 4,216 \text{ #/in.}^2 \text{ (C)}$$

$$f_{t2} = \frac{My}{I} + \frac{P}{A} = 4,430 + 214 = 4,634 \text{ #/in.}^2 \text{ (T)}$$

$$M.S. =$$

+ Large

ELEVATOR CABLE CONTROL HORN (36C018)

The critical bending moment occurs 2.19 in. below the E of the torque tube. Cable load = 665 # (Ref. p. 7)

$$M = 665 \times 20.44 = 13,600 \text{ in. #}$$

CONTROL HORN

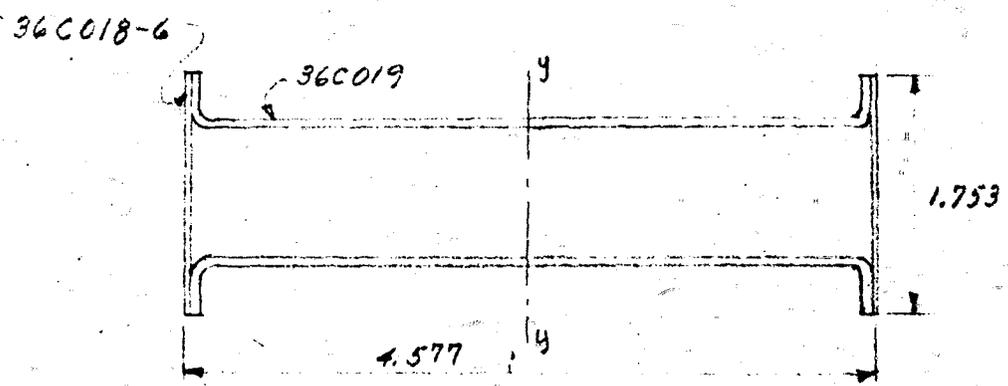

FIG. 4 - SECTION THRU HORN

$$I_{y-y} = 1.20 \text{ in.}^4$$

$$f_b = \frac{My}{I_y} = \frac{13,600 (2.29)}{1.20} = 26,000 \text{ #/in.}^2$$

Rudder Controls and Brake Pedal System

The rudder control and brake pedal system on the XB-36 is similar to that of the YB-36 and B-36A. By comparison of Figure R-1, Report Number F23-36-150 and Figure B of this report, it can be seen that a cable runaround system is used on the XB-36, while a push and pull bar replaces the runaround system on the YB-36 and B-36A. Also, a quadrant (36C040) is used on the XB-36 instead of the segment (36C4525) installed on the YB-36 and B-36A airplanes. Also A-frame rudder and brake pedal shaft supports are fabricated from drawn 245T aluminum alloy and extruded angles. (36C067)

The rudder servo control system on the XB-36 airplane is also similar to that on the YB-36 and B-36A, except the rudder servo control quadrants (36C1746), the belleranks (36C1721), and the torque tube (36C1723).

Rudder and Brake Pedal System

since the XB-36 shaft is shorter, it is unnecessary to check the XB-36 shaft (36C076) for failure.

Rudder and Brake Pedal System

Figure 11 shows the applied loads to the shaft. For significance of numbered points on shaft see Figure R-4A of the Rudder Analysis. (Report No. FZS-36-150)

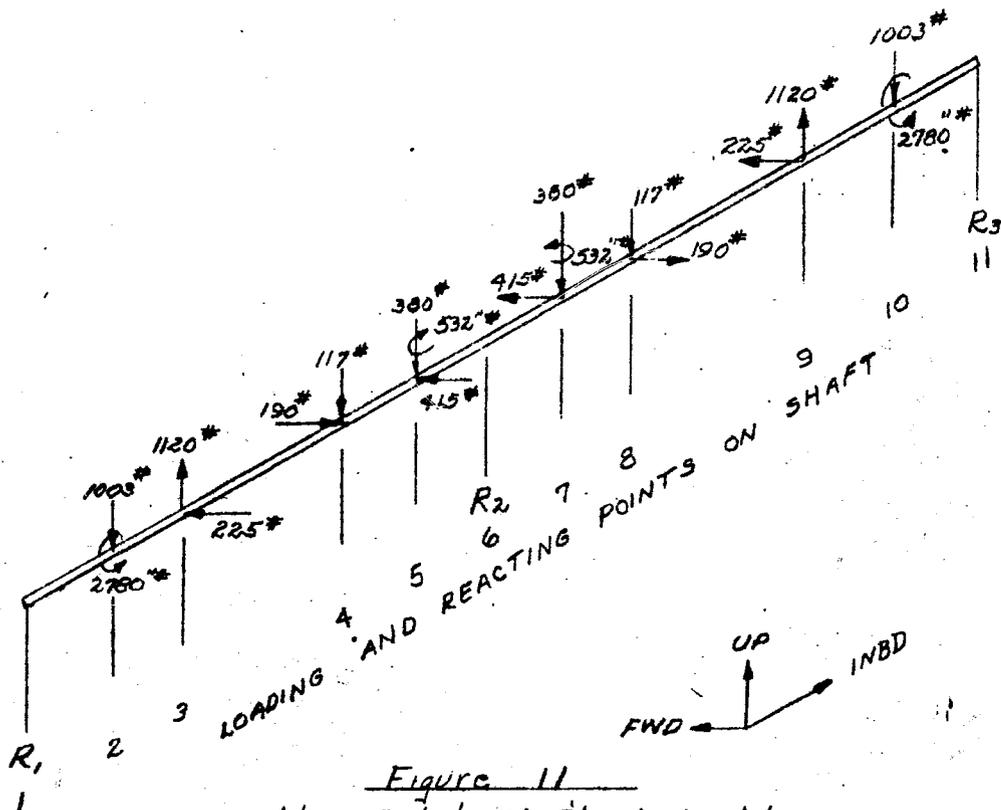

Figure 11
Rudder Pedal Shaft - L.H. Side
Ref. 36C006-21

By comparison of this figure with that of Report No. FZS-36-150, Figure B-5, it is seen that the loads applied to a slightly shorter rudder pedal shaft are the same except for a smaller vertical load on the pedal frame. Thus the XB-36 and B-36A rudder pedal shaft loads will be conservative in checking the A-frame supports on the XB-36.

Rudder and Brake Pedal System

Check -10 (Ref page 20) for column failure

$$f_c = \frac{P}{A} + \frac{MY}{I}$$

where $P = 295\#$ (Ref. page 20)

$$= 1865 \#$$

$$A_{br} = .188(.188) = .0354 \text{ in}^2$$

$$f_{br} = \frac{1865}{.0354} = 52,750 \#/\text{in}^2$$

$F_{br} = 83,000 \#/\text{in}^2$ for 24ST Aluminum alloy

$$M.S. = \frac{83000}{52750} - 1 = \underline{\underline{+1.57}}$$

Analysis of Rudder Servo Control System

$$\begin{aligned} \text{Auto pilot load} &= 376 \# && (\text{Ref. page 12, Report No. F25-36-150}) \\ \text{Pilot load} &= 394 \# && (\text{Ref. page 25}) \\ \text{Total} &= 770 \# \end{aligned}$$

The upper rudder quadrant and the lower rudder quadrant are identical (Ref. 36C1723). Assume for unequal distribution of the load that 60% of the load goes into one quadrant and 40% into the other.

$$\text{Max. load on quadrant} = 770(.60) = 462 \#$$

Check lug on quadrant for tearout (Ref. 36C1746)

$$\begin{aligned} P &= 462 \# \\ A &= 2(2)(.5 - .312)(.188) \\ &= .1412 \text{ in}^2 \\ f_s &= \frac{462}{.1412} \\ &= 3270 \#/\text{in}^2 \end{aligned}$$

$$F_s = 16,000 \#/\text{in}^2 \quad (\text{Structures Bulletin B-4})$$

$$M.S. = \frac{16000}{3270} - 1 = \underline{\underline{+ 3.9}}$$

Check bearing of bolt on lug

$$\begin{aligned} P &= 462 \# \\ A_{br} &= .312(.375) \\ &= .117 \text{ in}^2 \\ f_{br} &= \frac{462}{.117} \\ &= 3950 \#/\text{in}^2 \end{aligned}$$

Analysis of Rudder Servo Control System (Cont.)

$$F_{br} = 45000 \text{ #/in}^2 \quad (\text{Structures Bulletin B-4})$$

$$M.S. = \frac{45000}{3950} - 1 = \underline{\underline{+10.4}}$$

Bending on lug is not critical because of the short moment arm.

Bellcrank Analysis

The object now is to take loads from the quadrants and beam them on torque tube (36C172) to find loads applied to the two bell cranks. (36C172)

$$\text{Resultant load on bellcrank (36C172)} = 976 \text{ #}$$

$$\begin{aligned} \text{Moment about center of rotation of bellcrank} &= 2.75(976) \\ &= 2685 \text{ in-#} \end{aligned}$$

$$\begin{aligned} \text{Load on one arm of bellcrank} &= \frac{2685}{4.453} \\ &= 603 \text{ #} \end{aligned}$$

$$\text{Load in cable from bellcrank to rudder trim tab} = 603 \text{ #}$$

Check tearout of bolt thru lug of arm (36C172)

$$P = 603 \text{ #}$$

$$\begin{aligned} A &= 2(2)(.5 - .125)(.192) \\ &= .288 \text{ in}^2 \end{aligned}$$

$$\begin{aligned} f_s &= \frac{603}{.288} \\ &= 2090 \text{ #/in}^2 \end{aligned}$$

$$F_s = 16000 \text{ #/in}^2 \quad (\text{Structures Bulletin B-4})$$

$$M.S. = \frac{16000}{2090} - 1 = \underline{\underline{+6.65}}$$

Analysis of Servo Control System (Cont.)

Check for bearing of bolt on lug

$$P = 603 \#$$

$$A = 2(25)(.192)$$

$$= .096 \text{ in}^2$$

$$fbr = \frac{603}{.096}$$

$$= 6300 \#/\text{in}^2$$

$$Fbr = 45000 \#/\text{in}^2$$

(Structures Bulletin B-4)

$$M.S. = \frac{45000}{6300} - 1 =$$

$$\underline{+6.15}$$

Check section of bellcrank for bending

Section is located 2.9 in from center of 2 holes in end of arm (Ref. 36C 1721)

$$A = .58 \text{ in}^2$$

$$I = .366 \text{ in}^4$$

$$f_t = \frac{P}{A} + \frac{MC}{I}$$

$$= \frac{603}{.58} + \frac{2.9(603)(1.06)}{.366}$$

$$= 1040 + 5070$$

Analysis of Rudder Trim Tab System

The rudder trim tab control system on the XB-36 is identical to the rudder trim tab control system of the YB-36 and B-36A, except for a portion of the system in the pilot's pedestal and the co-pilot's pedestal. In the case of the XB-36, the pilot's and co-pilot's controls in the pedestals are connected by a chain, whereas on the YB-36 and B-36A, there is only one rudder trim tab control system for the pilot and co-pilot.

Check Diamond Roller Chain #89 for tension

Torque applied by pilot = 150 in-# (6ft) (Ref. p. 127 Report No. F25-36-150)

Pitch radius of sprocket = .878 in. (Ref. 360212)

Load applied to chain = $\frac{150}{.878} = 171\#$

Allowable tens. load = 700# (Diamond Catalogue)

$$M.S. = \frac{700}{171} - 1 = \underline{\underline{+3.1}}$$

Check bearing on tube due to pin thru sprocket

Tube = $\frac{3}{4} \times .065$ 245T AL. Alloy

Pin dia = .188 in.

load = $\frac{150}{.75} = 200\#$

$A_{br} = 2(.065)(.188) = .0244 \text{ in}^2$

$f_{br} = \frac{200}{.0244} = 8180 \#/\text{in}^2$

$F_{br} = 133,000$ (Structures Bulletin B-1)

$$M.S. = \frac{133,000}{8180} - 1 = \underline{\underline{+15.3}}$$

ABSTRACT:

Analysis is made of the control system of the XB-36 bomber. This analysis is an addendum to the stress analysis previously given for the YB-36 and B-36A bombers. Attention has been given to the control column, aileron controls, elevator controls, elevator trim tab system, rudder controls and brake pedal system, rudder control system and rudder trim tab system. A summary of the margins of safety is included.
